

Natdis' Environmental Policy is based on several pillars:

- Responsible procurement
 - When choosing goods, there is a focus on Quality, Durability, Possibility of repair, Lifecycle and possible environmentally friendly alternatives
 - Natdis will shop locally if possible and continuously work on optimizing transport activities.
 - Electronic components must primarily be repairable, of high quality and preferably from local suppliers.
- Responsible disposal
 - Packaging/pallets are reused if possible
 - Waste is sorted as a minimum, cf. applicable legislation, and preferably better where this serves the purpose.
- Company profile
 - The company always seeks to implement in considerations of the environment and sustainability, as well as local development, in its choice of location.
 - In terms of applied heating and energy for transport, more and more climate-friendly alternatives are sought.
 - Indirect discharge of energy from e.g. business trips are continuously minimized.

Natdis ApS commits to protect the environment in general, including ensuring continuous prevention of pollution as well as continuous compliance with its own binding obligations. Natdis ApS will continuously work for an ongoing improvement of both operations, and the quality and environmental management system in general.
